
Turning Up the Heat on Climate-Related Workplace Safety

Description

Cloutput Industries, a pioneer in health and safety solutions for high-risk sectors, is stepping up to address the alarming rise in climate-related workplace deaths.

The European Trade Union Confederation (ETUC) recently issued a warning about the increasing number of fatalities at workplaces due to extreme heat, particularly in the European Union. The International Labour Organisation (ILO) estimates that in 2020 alone, 80,800 people suffered injuries at work due to heat exposure, and 67 people died as a result of working in extreme heat. This represents a staggering 42% increase in heat-related workplace fatalities since 2000.

“Cloutput Industries is deeply concerned about these statistics,” says Bradley Clark, General Manager at Cloutput Industries. “We believe that no worker should risk their life due to extreme temperatures. Our mission is to transform standard safety documentation into powerful tools that not only ensure regulatory compliance but also boost efficiency and performance.”

Cloutput Industries specialises in providing health and safety solutions for high-risk sectors such as construction, manufacturing, agriculture, engineering, and mining. The company’s approach goes beyond mere regulatory compliance, aiming to create safer workplaces through strategic planning, resource allocation, and safety investments.

In response to the ETUC’s warning, Cloutput Industries is committed to developing innovative solutions to mitigate the risks associated with extreme heat in the workplace. The company is currently exploring various strategies, including the implementation of flexible working hours to avoid the hottest part of the day and the development of heat-resistant protective gear for workers.

“Adapting to the changing climate is not just about survival, it’s about thriving in the face of adversity,” adds Clark. “At Cloutput Industries, we are dedicated to creating a safer, more sustainable future for all workers.”
